

## Details

# FPS 500M *digital* Dualmaster

## Heidenhain Positip 8016 touch active – straight cut control

Comfortable to operate active – straight cut control with 12" touch screen for position value display, dialogs, inputs and graphic functions.

- Recurring work sequences can be grouped into programs.
- Programming of rectangular pockets with one cycle
- Distance-to-go operation with input of the nominal position in absolute or incremental dimension
- Probing functions for reference point determination (edge, centerline and circle center) also optionally possible with touch probe.
- Definition of program parameters (speed, feed rate, etc.)

## Hydromechanic clamping system

The spindles, vertical and horizontal, are equipped with a hydromechanic tool clamping system.

Tool holder **SK 40 / DIN 69872** or **DIN 2080**

## Details

### Slidable milling head

The vertical milling head can be additionally moved **150 mm** in the longitudinal axis for maximum working range, thus increasing the **X - Y** working area to **500 x 600 mm**.

To make the adjustment of the milling head arm in the longitudinal axis as comfortable as possible, an additional removable handwheel has been installed.

### Vertical milling head

The milling head can be swilled **+/- 90°** and can be positioned in any number of degrees via a scale.

Optionally, a **digital angle encoder** can be used to align the vertical milling head with an accuracy of **+ / - 5" (angular seconds)**.

## Details

### Locking at the milling head

After the horizontal working or swiveling of the milling head it can be quickly brought back again in the **vertical position** via a locking and can therefore be **immediately repositioned**.

### Telescopic vertical quill

The vertical spindle is manually telescopic by **80 mm** and can be used as a drilling quill. The telescopic quill has a clamping feature.

### Horizontal working (Option)

For horizontal working the milling head must be swiveled by 90° and pushed backwards.

For horizontal machining, the vertical milling head does **NOT have to** be dismantled, it is pushed into the rest position.

This makes changing the machining levels quick and easy.

## Details

### Telescopic horizontal quill (Option)

The horizontal spindle is manually telescopic by **100 mm** and can be used as a drilling quill.

The telescopic quill has a clamping feature.

### Handwheels

Mechanical manual safety handwheels with additional scale ring in all axes with sensitive response.

The handwheels are arranged ergonomically and user-friendly for maximum ease of operation.

### Handwheel scale

In addition to the digital display, a scale on the handwheel allows easy positioning.

## Details

### Fixed table

The fixed table is included in the basic equipment of the machine.

It has a clamping surface of **630 x 470 mm** and the max. load is **350 kg**.

The fixed table has **seven 14H7** slots, with a distance of **63 mm**.

### Automatic central lubrication

Lubrication of all guides and spindles due to a time interval.

### Coolant in spindle base

Articulated hoses can be used to ensure that the tool is supplied with coolant in any position.

## Details

### Coolant tank

External, movable coolant tank with a capacity of **80 liters.**

The coolant pump is integrated in the coolant tank.

### Main spindle drive

Main drive by a high-torque direct drive.

Speed range:

**20 – 5.000 rpm infinitely variable**

Output power:

**7,2/14,1 (100%/25% DC)**

### Feed drive

Internal, infinitely variable, digital feed in all axes.

Feed range:

**0 – 2.000 rpm infinitely variable**

Rapid traverse:

**5.000 mm/min**

## Details

### Mobile swarf tray (Option)

Generously sized swarf tray under the swivel table.

Optional swarf tray only in conjunction with swivel table. Standard swarf tray not required.

### Swivel tilting table 2231 (option)

Turn/tilt/tilting table for universal processing of parts.

- Can be **tilted** from / to the machine, **30° each**
- Can be **swiveled** to the left & right, **45° each**
- Clamping surface **375 x 660mm**
- **T-slots: 8x 14mm / alignment slot 14H7**
- Max. load 300kg

### Moving chip tray (option)

### Milling splash protection (Option)

Electronically fused splash guard for manual operation.

Spindle operation is only possible in the working position of the cutter guard.1

## Details

### Three-sided splash guard (option)

Three-sided splash and chip guard for mounting on the moving chip tray.

Each component is individually and independently foldable.

**Width:** 1470 mm  
**Depth:** 1033 mm  
**Height:** 494 mm

## Details

### **Full protection cabin (option)**

Full protection cabin to avoid emissions with optimal, user-friendly 2 side access. Glazed on all sides, front with tempered glass

### **Extendable splash guard (Option)**

Additional, laterally extendable splash guard in the lower cabin area, under the fixed table.

Protects the operator from coolant and swarf in the leg area, especially during manual operation.

## Details

### **Foot switch for tool clamping (Option)**

For convenient clamping of tools without additional pressing of a switch on the control panel.

### **Minimum quantity lubrication (Option)**

Minimum quantity lubrication UFS20 for coolant (oil mist lubrication) mounted on the spindle base. The nozzle can be removed from the machine. A compressed air supply to the machine is required (4-8 bar at 20 Nm<sup>3</sup>).

### **External blowing air on spindle base (Option)**

External blowing air on spindle base with removable nozzle. Incl. articulated hose and pneumatic maintenance unit. A compressed air supply to the machine is required (4-8 bar at 20 Nm<sup>3</sup>).

## Details

### **Pneumatic maintenance unit**

Pneumatic maintenance unit for preparing the external compressed air.

### **Overarm with counterbearing (Option)**

Overarm with counterbearing for horizontal working.

### **Swarf conveyor (Option)**

For facilitating the removal of swarf from the work area. Swarf conveyor suitable for wet and dry machining.

**Discharge height 800 mm.**

## Details

### Camera (Option)

Camera for workspace monitoring.  
The camera is protected against penetration of liquids and dust.  
Video output via HDMI.
